

PHYS 3200 - End of Topic Quiz Reflection

Instructions

You may complete this reflection for 50% of any missing points on a graded End of topic Quiz. For each problem with missing points, you need to answer the two questions below. Your reflection is due one week after the posting of solutions for any given quiz. Once you have submitted your reflections, the grade for that quiz will be changed to incorporate 50% of the originally missing points.

You may only complete the reflection questions for problems you tried in your original submission. You may not get credit for doing reflections on problems you left blank.

Reflections will be submitted on Gradescope or discussed in person with the instructor. Please put all your reflections in a single document when submitting.

Format

Quiz #:

Problem #:

1. **What mistakes did you make or misconceptions did you have that led to your initial solution being incorrect?**
2. **Using the provided solutions, explain the correct method for solving the problem in your own words.**(Note: this is not asking for you to replicate the solution. You need to use your words and detailed steps rather than just equations and numbers alone.)
